**STEP-BY-STEP HELP
FOR COMMON PROBLEMS**

Troubleshooting Flowchart for macOS- Step-by-Step Help for Common Problems

Introduction

This guide is designed to help you fix common problems on your Mac, even if you're not a tech expert. Follow the steps one by one. If one step doesn't solve the issue, move on to the next. Take your time—there's no rush!

1. Is your Mac turning on?

Yes: Go to step 2.

No:

- Make sure the power cable is plugged firmly into the wall and your MacBook or iMac.
- For a MacBook, check that the charger is connected and the charging light is on (if available).
- Press and hold the power button for a few seconds and try again.
- If there are no sounds or lights, try a different outlet.
- Still nothing? It may be a battery or hardware issue. Call Apple Support or ask a trusted helper.

2. Can you connect to the internet?

Yes: Go to step 3.

No

- Look at the top-right corner of your screen. Do you see the Wi-Fi symbol with an "X" or empty lines? That means you're not connected.
- Click the Wi-Fi icon and select your home network. Enter the password if asked.
- If it doesn't work, restart your Wi-Fi router: unplug it, wait 30 seconds, and plug it back in.

Wait one minute and try reconnecting.

If you still can't connect, ask someone for help or call your internet provider.

3. Is your keyboard or mouse/trackpad not working?

a) If it's wired:

- Check that the cable is plugged in all the way.
- Try another USB port.

b) If it's wireless (Bluetooth):

- Make sure Bluetooth is turned on: Apple Menu > System Settings > Bluetooth.
- Recharge or replace the batteries.
- Turn the device off and back on.

c) Still not working?

- Restart your Mac.
- If the issue continues, try another keyboard or mouse.

4. Are you seeing error messages or pop-ups?

- Write down the message or take a photo with your phone.
- Restart your Mac and check if the message disappears.
- If it continues, search the message online using Safari.
- Only install apps from the App Store or the developer's official website. If your Mac blocks an app, it may be unsafe.

5. Is your Mac running slowly?

- Close apps and browser tabs you're not using.
- Restart your Mac.
- Check your storage: Apple Menu > About This Mac > Storage. Delete large or unneeded files.
- Empty the Trash (right-click the Trash icon in the Dock > Empty Trash).
- Remove apps you no longer use: drag them from Applications to the Trash.

6. No sound?

- Look at the top-right menu bar. Click the speaker icon. Make sure volume is turned up and not muted.
- Check if headphones or speakers are properly plugged in or connected via Bluetooth.
- Apple Menu > System Settings > Sound: confirm the correct output device is selected.
- Restart your Mac if there's still no sound.

7. Is your screen frozen or not responding?

- Press Command + Option + Esc to open Force Quit Applications.
- Select any app marked "Not Responding" and click Force Quit.
- If that doesn't work, hold down the power button for 10 seconds to shut down. Then press it again to restart.

8. Did an app stop working?

- Close it and reopen it.
- If it still won't open, restart your Mac.
- Uninstall and reinstall the app from the App Store or its official website.
- For App Store apps: open App Store > Updates and install any available updates.

9. Problems with printing or scanning?

- Make sure the printer/scanner is turned on and connected (USB or Wi-Fi).
- Apple Menu > System Settings > Printers & Scanners: check that your device appears.
- If not, click Add Printer and follow the steps.
- Restart both the Mac and the printer if problems continue.

10. Try Apple's built-in tools

- Apple Menu > System Settings > General > Software Update: install updates (they often fix issues).

- Use Disk Utility (Applications > Utilities > Disk Utility) to check your disk: select your disk > First Aid.
- Visit the Apple Support website: support.apple.com for guides and chat help.

11. Still stuck?

- Don't worry—technology can be tricky for everyone.
- Write down what's happening.
- Ask a family member, Apple Support, or visit an Apple Store.
- You can also search your exact problem in Safari with “macOS” added to the search.

Remember: You are not alone! Every user runs into tech problems. This guide is your friendly starting point to solve the most common ones. Be patient, take breaks, and ask for help if needed. You're doing great!
