

Troubleshooting Flowchart for Windows

Step-by-Step Guide

Troubleshooting Flowchart for Windows 11 – Step-by-Step Help for Common Problems

Introduction

This guide is designed to help you fix common problems on your Windows 11 computer, even if you're not a tech expert. Follow the steps one by one. If one step doesn't solve the issue, move on to the next. Take your time—there's no rush!

1. Is your computer turning on?

Yes: Go to step 2.

No:

- Make sure the power cable is plugged in properly to the wall and your laptop (or desktop tower).
- Try pressing the power button again.
- Look for any lights on the computer. If there are none, check the outlet or try another socket.
- If your device still won't turn on, it might be a battery or hardware issue. Call a technician or ask a family member for help.

2. Can you connect to the internet?

Yes: Go to step 3.

No:

- Look at the bottom-right corner of your screen. Do you see a globe icon or Wi-Fi symbol with an X? That means you're not connected.
- Click the Wi-Fi icon and try connecting to your home network. Enter the password if asked.
- If it still doesn't work, unplug your router (the box that gives you Wi-Fi), wait 30

seconds, and plug it back in.

- Wait a minute and try reconnecting.
- If still no luck, ask someone for help or call your internet provider.

3. Is your mouse or keyboard not working?

a. Check if it's wired:

- Make sure the **cables** are **plugged in** all the way.

b. If it's wireless:

- Check the **batteries** or recharge them.
- Try turning the device off and back on.

c. Still not working?

- Try using a **different USB port** or restarting the computer.

4. Are you getting error messages?

- **Note down the message exactly as it appears.** You can take a photo with your phone.
- **Restart your computer** and see if the message disappears.
- If the **error continues**, search for it online using Microsoft Edge or ask someone you trust to help.

5. Is your computer running slowly?

- Close any **apps** or windows you're not using.
- **Restart** the computer.
- Open the **Settings app** (Windows key + I): Go to **System -- Storage -- Delete unnecessary temporary files**.
- Consider **uninstalling apps** you no longer need.

6. No sound?

- Look at the **bottom-right of your screen**. Click the speaker icon.
- Make sure it's **not muted** and the volume is turned up.
- If you're using **speakers or headphones**, make sure they are plugged in properly.

- Try restarting your computer.

7. Is your screen frozen or acting strange?

- Try pressing **Ctrl + Alt + Delete** - Then choose **Task Manager**.
- Select any app that says “**Not responding**” and click **End Task**.
- If that **doesn't work**, hold down the power button for 10 seconds until the computer shuts off. Then turn it back on.

8. Did a program stop working?

- Close it and reopen it.
- If it still **doesn't work**, restart the computer.
- You can **uninstall the app and reinstall it from the Microsoft Store** or its official website.

9. Try Windows Troubleshooter

- Press the **Windows key + I** to open **Settings**.
- Go to **System -- Troubleshoot -- Other troubleshooters**.
- Click the button next to the area you're having trouble with, like **Internet** or **Sound**.
- Follow the instructions.

10. Still stuck?

- Don't worry! **Technology can be tricky**.
- **Write down what's going wrong**.
- **Ask** a family member, tech support, or visit a local tech help center.
- You can also type your problem into the **Microsoft support website**: <https://support.microsoft.com>

You're not alone! Every user, young or old, runs into tech problems. This guide is your friendly starting point to solve the most common ones. Be patient, take breaks, and feel free to ask for help if needed. You're doing great!
